This is my go at an Ender-5/Ender-5 Pro Bed Cable Strain Relief. I printed this in PET-G with 85% infill, and supports but with support blocker at the holes. This is a model with idea and dimensions based off of: <https://www.thingiverse.com/thing:3443100> by derandi3d but this is not really a remix. I made the model from scratch in Blender, following it's general shape as it fits on the printer. I did end up making the shape very similar. So I hope that does not violate anything?
