Summary

Mount a Baofeng UV-5R (or something else) in place of the useless rear ashtray

I use a radio as part of leading driving tours and prefer to use one hard-mounted with a hand-mic and direct power feed. This model provides a replacement for the rear ashtray in an E46 with mounting holes specifically for a Baofeng UV-5R. It could be used to mount anything in that spot though.

Two models are included, one that fits a little loose and one that fits a little tight, depending on your application. I ended up using the looser one.
