### Summary

Turn your DJI Mic into a microphone you can actually hold.

[Gadgets](#) > [Audio](#)

The DJI Mic has tiny transmitters that are very awkward to handhold, and after seeing a design on Thingiverse by user "gubich" <https://www.thingiverse.com/thing:5415831> I decided to expand on his idea a little.

There are 4 version, a plain one with only a tripod screw mount on the bottom, one with a tripod mount on the side as well, a GoPro compatible mount point and a version with all the mounts.

The cavities for the tripod mount are designed for the excellent threaded inserts by CNC Kitchen, <https://cnckitchen.store/products/gewindeeinsatz-threaded-insert-1-4-20x12-7-kameragewinde-20-stk-pcs>

I purchased a 40 something mm windscreen and it seems to hang on there.
