20% infill recommended, the more walls the better to help hide infill from the text. You can print this with up to 0.25 mm layer height with the text still being legible (0.15-0.20 mm layer height recommended.)

Detect/print thin walls should be enable for RIP text to show up correctly!

Fits most beverages but you can scale it up if you need the drink opening to be larger.

Tag me on Twitter (@b1g_jano) if you print this! Would love to see them!
