Summary

A watering bulb that is printed in vase mode

[Household](#) > [Outdoor & Garden](#)

My first Design, inspired by the self watering bulbs from <https://www.thingiverse.com/thing:2806758> and <https://www.thingiverse.com/thing:2959693> which wouldn't really print and always fail on the same height.

So I designed my own and took a bit of the overhangs out, which helped me printing it and made it look like a pear.

You can easily scale it down to 50% to use on smaller plants, too.

Print Settings

Printer Brand:

Crealitiy

Printer:

Ender 3 Pro

Rafts:

No

Supports:

No

Resolution:

0.32

Filament:

Any brand you like PLA

Notes:

Print in Vase Mode, Cura calls it spiralize outer countour.
Use 4 bottom layers and 0 top layers

How I Designed This

I used tinkercad designing this and it was a lot of fun.
