[inch](#) [multitool](#) [anglefinder](#) [metalworking](#)

Universal tool for taking measures and making marks on rectangular objects. Contains both metric and imperial units. Ideal for wood workers, but also usable on plastic, metal or many other materials. Also contains templates to mark angles.

This is my very first design, so please forgive me some minor errors, if you need anything changed, please, write me a message and I'll try to remake it for you.

Object is divided into two parts for easier printability. Both parts must be glued together at right angle to work properly.

Print instructions

Print two separated parts, then glue them together **at right angle**.
