Summary

3D wolf that was sculpted and posed in blender. Testing printing myself to ensure it would print well.

I've been working on improving my models for 3D printing, and I am really happy with how this one turned out. I have separated the wolf from the base for printing because I found that to be easier for painting. I know there's still improvements I could make on the model, but I am happy with how this one printed.

I found that printing with tree structures worked best for cleaning up the model after printing, but if anyone discovers ideal printing settings I'm always interested in ways to improve my prints.
