Summary

Xbox Original mod chip holder for Open Xenium

[Hobby & Makers](#) > [Other Ideas](#)

Tags: [holder](#) [original](#) [xbox](#) [openxenium](#)

While modifying the Original Xbox (XBOXOG) I noticed the OpenXenium Mod Chip didn't seem to be very stable and was moving a lot when plugged into the motherboard.

So I designed this simple but effective platform / holder that makes the modchip not move at all.

It wraps around the pin header of the modchip & pin header on the xbox.

You can print in any settings you wish, I went with Cura Dynamic Quality & 20% infil.

Added a v2 for Xbox V1.2 - 1.3 boards due to a small smd cap at the side. (RedOverlord feedback)

Added a new style of clip, this one just clips around the OpenXenium and has one leg to keep it up. It is a tight fit !!

Shout out to the MakeMhz discord for all the positive feedback! If you haven't joined their discord, great place for support and their XboxHD+ mod.

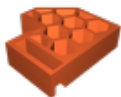

2024 Update:

I have been made aware of someone selling this model on eBay, so I have reached out to the seller to give credit to where they have gotten the model from. I don't mind people selling as a 3D printable service, but please give credit to the original design !!
