### Summary

I designed this model to hold my Amazon Firestick remote, my TV remote, plastic forks and knives, napkins, and coasters.

I call it a Game Day Hub because we mainly use it for Sundays during NFL season when watching games all day and eating snacks, but it's essentially a remote control holder with a few added features. You can theme it however you want, but the one I made was Tennessee Titans themed, and the coasters have the Titans logo on them.

I designed the holder but I did not design the specific coasters in the pics. I got the coasters from <https://www.thingiverse.com/thing:3549088>, but any coasters with a diameter of 90mm or less will work. I uploaded a blank coaster to this post rather than the Titans one since I did not design that one. There is also a slot on the side to hold an additional coaster and act as decor.

I use my Fire stick for all functions of my TV aside from turning the TV on and off. So I wanted the Fire stick to be easily accessible and convenient to take off and put back. The Sony TV remote is only used for power to the

TV, so I have it embedded all the way in the Hub with basically only the power button exposed. I don't have to take that remote out to use it and it gives the feeling that the Hub is the tool to power the TV on/off rather than the remote itself. The remote is easily removable if necessary though. If you don't have a remote that fits that slot, you can use it for something else like plastic spoons.

There are slots for plastic forks and knives, but you can use them for other purposes if you want. The napkin holder fits standard Luncheon napkins.

No supports required to print.

This model is large, it will take up to a full 1kg spool or maybe more depending on the infill %. I have an Ender 3 Pro and it fits comfortably on that print bed (model is roughly 200mm x 220mm).

The light blue pieces from my pics are optional, but they add a nice flair of color especially if you're theming it after a sports team.
