This is a Simple mount for the Wyze motion Sensor.

The adhesive holding ours up was failing and it was detecting a little further than we wanted so I designed this to both secure it to the wall and to block part of the field of view where we didn't want it detecting.

The screw holes were just made for some random screws that were found and as such I have included the Fusion 360 file so that you can change the size of those to fit your screws as well as to adjust / remove the field of view blocker.
