[unifyingreceiver](#) [usb](#)

I added a thicker bottom / back, widened the clippy bit and put a bigger circle on it and placed a hole in it for a keyring to go through it

the keyring helps act as a stop to prevent the dongle slipping out, also any movement / swinging will push the dongle further into the holder,

works with all 3 styles of Logitech usb dongle, as well as other micro dongles (like the Rii keyboard I have)
