A simple screw-top container sized for common in-ear monitors, particularly Westone UM50s. I felt the container that came with my IEMs was too small and cramped, so I made a larger container. This model also makes a great earplug case when scaled down in size.

I've printed several of these in eSun ePA and various brands of PLA.

Only pointer - watch your printer's acceleration settings. The grip grooves on both parts can cause some shaking while printing.
