Allows you to mount the SKR Mini e3 V3.0 in the CR-10 V3 control box so it is firmly secured with the stock screws. Further, the USB port and microsd card slot are in perfect alignment of the original control box holes. Works like a charm!

This is a slight modification of the [SKR MINI E3 V3 Adapter plate vor CR-10 V3](#) by [triemerh](#) on thangs. I converted their model to an STL, then hollowed out the holes so the mounting plate could be screwed in to the top of the control box. All credit for the original design goes to triemerh. There was no license information on the thangs site, so please contact the original designer for commercial-use questions.

For the step file and 3mf file, go to the original creators page linked above.
