updated 10. 11. 2022 | published 10. 11. 2022

Summary

An XT60 Connector Mount for installation into the Skirts of a Voron V2.4R1.

[3D Printers](#) > [3D Printers - Upgrades](#)

Voron 2.4R1 XT60 Skirts Mount to passthrough juice for externally mounted hardware like an **ERCF** using an **ERCF-Easy-Brd**. May also work with the R2 and/or the Trident (depends on the size of the Skirts Hexagonal Holes).

BOM:

- The two 3D printed Halves (needs to be separated in the Slicer)
- 1x Amass XT60 Connector (the ones with the cover in the back)
- 2-4x M2x10mm Screws (Socket or Round Head Screw)

Installation:

1. Solder the Wires to the Male XT60 Connector Plug.
2. Create a Sandwich with the two halves of the Mount with the Connector and the Skirt between them.
3. From the inside - Screw the two halves together using 2-4x M2x10mm Screws.
4. Profit!
