**For more credibility resize down to 80% size of downloaded models.**

Model here is more popular (more used) version of “the key” from the French / International competition show “**Les Clés De Fort Boyard**”

There is also half-version for glueing two halves together and get nicer output if you dont mind merge line, if you have troubles to align both halves, you can use insert part.

Depends on your tolerancies, if you have trouble to snap two halves together with normal insert try “key insert smaller” file, or adjust Z size of the model as you need.

This model has been created only according to tv footage of the competition / tv show. No actual dimmensions are available to me.

Special case is model with **FB letters** on the ring, that has been used in the “**L'arbre à clés**” room

This version are files with “labreacles” in name.

Since start of production there has been in total two general types.

This is one (right on image) is more often used also up to this date, other one (left) is not that key-looking one and that was also the reason why production returned to use this type. Locks on treasure room are genuine working locks, because of that is the prop actual working metal key. Keys

used in tv show are closely watched and very often repaired, ring to the rod part of the key is welded and often re-welded. So far by my research there is no way to obtain actual key even as a genuine “official” copy, so i decided to print one..

I would like to create also other version of the key but i do not have enough pictures yet.

On this picture you can see 3D graphics of other version used at that time below timer.
