I used the silent loop 2 AIO 360mm Watercooler from be Quiet on a Silverstone GD08 computer case. The cooler is one fan bigger than the case so it want fit.

This Model helps to adapt the cooler to the case, minial cutting of the case is mentadory to route the pipes inside. It is not possible to print everything together, you have to glue the parts and place the M4 Nuts inside of the object. It is possible to mount 2 additional Fans inside the GD08 Case use 35mm M4 screws with a flat head to fix the adapter and the Fans to the case.
