If you're in the alarm industry you are likely familiar with the Lynx Touch and likely have been working with the LYNXTOUCH-MSD updater tool for upgrading LTE radios in these panels. I made this box to hold the PCB and instructions to keep them from getting ruined in the tool box. I've included models for a standard nut as well as a square nut. The larger hole for the bolt is designed to hold a spring to hold tension on the lid to keep it shut, the spring size is actually a stock bed spring from my Ender 3 (I upgraded to the yellow springs). I've also included a plain lid as well as a version with a text label.

Enjoy!
