Summary

A cool way to store and use the paper rolls from IKEA.

I made this holder for my daughter's crafting desk to hold the IKEA roll of paper. The brackets screw to the wall and the cutter arm is attached to the brackets using Chicago Screws. The brackets are designed for a 19mm dowel.

Printing should be pretty straight forward. The cutter arm is divided into 2 files because most print beds aren't large enough to print a 500mm long item. There is a mortise and tenon joint designed into the cutter arm so just a bit of your favourite adhesive and you should be good to go.

Hope you enjoy, would love to see your makes!
