Made a smaller version of the wedding gift house which can be glued together based on a frame. Ideally, the house should be sturdy and you should not see any glue residue anywhere.

Note: In the pictures the text on the roof was intentionally blurred for privacy reasons.

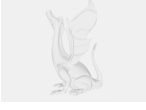

Glueing was done in the following order:

1. attach front and back walls to frame. They slot all the way on the bottom on the frame)
2. attach the sidewalls to the frame. They should slot in and make contact to the front and back walls, especially at the top where the roof comes on. At this stage, I used rubber bands which were CAREFULLY placed horizontally around the house while the glue was drying.
3. attach the roof

To customize the text on the roof, use the Fusion360 files and change the text in the last sketch.
