Summary

This contraption was made to hold a mask for a cough-assist device, but also works with a CPAP.

This model is made to fit into the corner tube on a medical cart. There are two pieces to the model, allowing the hook to spin freely.

I found that adding a brim helps ensure better bed adhesion. Also, you'll notice two supports mid-way along the bridge that snap off easily. They are not meant to remain on the final model.
