Remix of AmritChandhok's C270 mount. The slot for the camera to fit in was too small for the C920, so I increased the width of the opening to just fit the C920.

You just snap the mount onto the tubes of the Creality enclosure and then slide the camera into the slot. No modification to the camera or the enclosure is required.

This remix is based on

Logitech C270 Mount for Creality Enclosure
