The metal base plate on my [Andonstar 207](#) was a little small, so I printed this extension to give me more room. It looks like it might fit other Andonstar models, but don't quote me on it. The fit could be a bit tighter, but it's been good enough for now. The looseness is really only annoying when you pick the microscope up off the table since the printed base extension isn't physically attached. If anyone wants to improve it, let me know and I can share the Fusion 360 model.
