Summary

A simple to load small sanding block

Here's my remix of <https://www.thingiverse.com/thing:4639552>

I made this because I found the original to be extremely difficult to load sandpaper onto.

The sandpaper should be cut into a strip 15mm x 160mm long, and inserted into the sanding block starting at the 'heel' of the block as shown in some of the photos.

I've included a new option for the screw, which has a screw head extended by 6mm and might be a bit easier to loosen/tighten.

Note:

If you've already printed a screw for the original version, you'll only need to print the Main body and Top piece, since the screws are interchangeable.

I printed the top and bottom pieces with 35% infill, and **70% infill for the screw.**

This remix is based on

Sanding Tool (cale de ponçage)
