## Summary

Handy sorting tray for messy desks

[Hobby & Makers](#) > [Tools](#)

Tags: [sortingtray](#)

Everytime I build a new 3D printer all the loose boxes of different screws, washers and nuts around my desk annoy me so I came up with this tray.

Just put some of your required parts in the trays and put the rest back.

The tray is small enough to not be in the way of your work, it is low enough to not be knocked over, multiple trays can be placed on top of eachother and every compartment in the tray can be labeled with a 10 mm label.

The ridges on the bottom of the compartments prevents washers from laying flat so it's easier to pick them up with chubby fingers.
