Summary

Simple support for standard caravan/RV rails to hang anything you need.

[Hobby & Makers](#) > [Automotive](#)

Tags: [camping](#) [caravan](#) [rv](#)

Simple support for standard caravan/RV rails to hang anything you need.

Printed in PLA, but I recommend a UV stable material and better heat resistant than PLA, such as PETG or ABS.

Caution of the load you put on the rail itself.

PLA at 215C, bed at 65C, infill at least 50%, and no less than 4 perimeters for strength.

Also print keep in mid the print print orientation, should be printed along the X axis to ensure strength in the narrow section.
