updated 11. 11. 2022 | published 11. 11. 2022

Summary

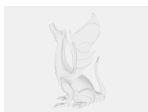

A sturdy Sliding Door Lock with optional filler block. Both are provided in step format so they're easy to customize.

Print as the attached .3mf files (for 0.6mm nozzle) to get the best strength for the parts. The filler block should be adjusted to match your door, and can be left away of course if there is no height difference. In my case the height was a considerable 16mm.
