Turn your penlight or flashlight in to a handy camping light. Great for ambient light when camping or as a tool light for working on cars etc.

Could probably be user for signaling as the “baton” lights upp pretty bright (depending on flashlights power).

A bit of maskintape can be used if you need a tighter grip between the diffuser and the flashlight.

The NEBO Columbo Flex 250 is 18mm in diameter at the front.

Printed in white PLA at 0.20 layer height with no support and 20% infill.
