Just a simple three digit counter that you can use to track any value between 0 and 999. Can also be used as three separate 0 to 9 counters. This was my use case. In Overwatch there is a weekly challenge to get 10 wins as two different types of heros, problem is, they never gave you your current stats.

I have uploaded a few different stand/bases to go with it. The blank one and the non-insert one are probably the easiest. There is one last one that I just can't seem to get to print perfectly, that has insertable DPS, Tank, and Support icons from Overwatch. I had to use a dremmel to get the fitment perfect. I dont know if this is my printers fault, my fault for trying to print something so small with tight tolerances, or just calibration issues. Either way, know that that one might take some fine tuning.

### Print Settings

**Printer Brand:**

Creality

**Printer:**

Ender 3 S1 Pro

**Material:**

PLA

**Rafts:**

No

**Supports:**

No

**Resolution:**

0.2

**Infill:**

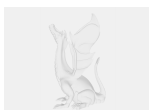

20
