Summary

Replacement adjusting knobs for an used tablesaw I recently got. The old knobs were broken and didn't grab the screw.

I recently got a used Einhell TKS 15./250 UV tablesaw and the knobs for adjusting the mitre angle knobs plastic has broken so they didn't work as intended. It seems they used an M8 screw and flattened one side so I created one larger knob for adjusting the angle with a flattened shaft and and one knob for a M8 nut to clamp the angle. Unfortunately I need some spacing between the angle adjustment knob and the base.
