Summary

Simple bento-style box for organizing first aid supplies. Fit for purpose for my household.

As a family with active children, we use our first aid supplies a lot. I was tired of fumbling around in a plastic box that didn't keep things well organized. I've tried using some of the off-the shelf boxes with some dividers, but either they don't fit well, or they are overkill (I don't need a whole tackle box for first aid - I'm not an EMT).

So, I printed up a tray with spaces fit for the things we regularly use - 1x3 bandages, alcohol prep pads, cohesive wrap, some ointments, large bandages, scissors, and a smaller miscellaneous space for random sized bandages, gauze, etc. Lucky for me, I found an arrangement that fit on the bed of my MK3S ;-)

Fun fact, I printed mine in PLActive AN1 - with is a 1% copper antimicrobial material.. so even the first aid kit is helping keep us healthy ;-)
