I found the Ender 3 Pro Fan Silencer by Lyl3 and the Skull Face by Vendageek and mashed them up. I also mashed the [Skull Face with a QR cover](#) for a matching set of aesthetics.

I separated them so I could get a .2 layer height on the Fan Silencer and a .12 layer height on the Skull for better detail. And just put a couple dabs of super glue to hold them together.

I created a "Stop at Height" post processing extension in Cura so I could have the "Ender" logo in green as well.

I also added supports to the skull to keep the negative space as close to square as possible. And there is a small gap between the skull's back teeth and the bed, so a dab of supports helped there as well.

I hope the tolerances are correct to fit snugly. They were perfect for me. If not, a little filing on the block on the baffle should do the trick.

It matches really well with the QR Cover.

Enjoy!
