updated 22. 11. 2022 | published 22. 11. 2022

Summary

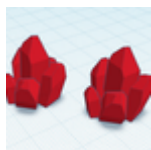

Earrings. Remixed to add holes for hooks instead of cylinders to glue on.

I suggest you print two at a time to give the top layers more time to cool down. I've printed the pictured examples with transparent PETG, 100% infill. You can get a more transparent, "glowy" look by printing only one or two walls. But that makes the tips of the crystals darker, while the centre is brighter, instead of the other way around.

This remix is based on

Crystal earrings
