Summary

This print will help you use standard speaker mounts on your JBL Control 5 speakers.

Created this to help me mount my speakers on the wall more securely. I can't find any mounts with the screw pattern needed for the top holes on the JBL Control 5 speakers. This will convert the JBL mount pattern to something a little closer to cheaper mounts you find on Amazon. I've printed this in PLA, .4 layer height, 25% infill, 4 walls, no support. So far it seems pretty sturdy. I will take some pics. Would love comments and feedback. I used 1/4 by 20 by 1.5" hardware to secure to the speaker as that is what the threads in the speaker are. On the other side i used M6 hex head I have to get longer ones though =D. It is really sturdy once mounted.
