No adapters for the Kwikset Convert Smart Deadbolt I got so I made my own in Tinkercad. Not bad for a first attempt I think. Printed in PETG and it has held up for a whole year. I printed at .08 but you could probably print normally at 2.0mm. Didn't feel safe using PLA since the sun could hit the doorway and heat it up through the deadbolt.

Crealitiy

Printer:

Ender 3

Rafts:

No

Supports:

Yes

Resolution:

.08mm

Infill:

100%

Filament brand:

Hatchbox

Filament material:

PETG
