I couldn't find anything to mount the Amazon Echo Show 5 underneath a cabinet so I created this. The Echo Show sits perfectly on the notch preventing it from sliding off. There are two slots on the back of the print for cable routing. When printing the part, orientate it so that it is on either of its sides (see second picture). I used supports touching the bed only, the cable routing slots turned out perfectly fine with out the supports. To mount the print, I used four 3/4" long screws. I used the print as a template to mark the holes and then predrilled pilot holes for the screws to prevent splitting of the cabinet wood. Ensure you don't drill or screw all the way through your cabinet.
