updated 23. 11. 2022 | published 23. 11. 2022

Summary

Modified and improved version of my previous model - clips on top of the E3D buggy and holds 6x 1/4" hex bits.

An updated version of my previous entry that holds T18 soldering iron tips, now loaded with greeblies! This will hold 6x 1/4" hex bits for screwdrivers (designed for the short length of the LTT screwdriver bits) and sits directly on top of the E3D buggy model.

I suggest printing with the bottom of the model flat on the bed, with a brim if you need some bed adhesion. Printing with a brim on the inside of the model will leave a little bit of the brim on cleanup, which helps the part "snap" onto the top of the E3D buggy and stay there.

This was also my first time modeling greeblies on a model to give it some character and depth so hopefully whoever is reading this likes it!
