Form: SD & micro SD card

Material: PLA / ABS

More informations: <https://byzantine-vault.com/en/>

BYZANTINE Vault is a reinforced case which allows to store, protect and transport electronic devices that contain your sensitive personal and/or professional data.

This technically proven solution keeps your electronic devices safe from many hazards such as water, dust, drop, scratch and electromagnetic waves. BYZANTINE Vault is made of an external case, manufactured in strengthened aluminium, into which a 3D-printed customizable holder is inserted.

Today, 6 different holder designs are available allowing to store the following devices: crypto wallet ( Ledger Nano S / Ledger Nano X and Opendime), USB stick and memory cards.

Want to create your own holder? Feel free to use the "100% customizable design" !

Or, you can directly download the existing designs available:

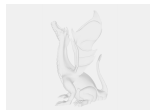

- Ledger Nano S
- Ledger Nano S plus
- Ledger Nano X
- Opendime
- USB stick
- Memory cards (SD and Micro SD)

STL & STEP and PART Solidworks Available

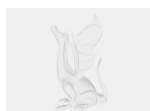

Comments are welcome to improve the design !
