I have designed a simple rotating platform to make videos of my 3d prints.

All that is needed is a small electric motor, 3 beerings and 2 screws.

Parts:

- Print both parts in your color of choice. The two parts are very easy to print and are designed for the i3mk3s. You need some internal support for the beerings.
- I'm using a 12V motor with a 9V battery. ([amazon](#))
- 3 beerings, 15mm x 24mm x 5mm ([amazon](#))

Here is a [Video of my turntable](#) on tiktok.

Have fun printing ;-)
