Summary

This is my take on making a funnel for 3D printer resin. Basically, it is a remix of that nice idea of dukedoks.

This is my take on making a funnel for 3D printer resin. Basically, it is a remix of that nice idea of dukedoks. I added ribs that help to keep the funnel above the bottle rim and make it quicker to filter the resin.

I used a piece of mesh that I took out of the paper filter. It is clipped between the funnel and nut. The same as in original thing of dukedoks.

Original thing can be found here:
<https://www.thingiverse.com/thing:3877007>

Print instructions

Clip a piece of mesh between funnel and nut. Use the mesh from paper filter.
