Summary

to hold a miter Gauge in the upright position at a drill press.

I made this to use the miter Gauge off my Craftsman Table Saw (model 137.228010) at the drill press to drill several holes at different angles on a rounded block of wood. It seemed easier than rotating the drill table every hole and its probably more accurate.

It could probably see some use in the future for some cuts at the band saw also I think

Mine ended up in 2 colors because I was running sort on 1 and wanted to use it up.
