Remix of just the surface part from <https://www.thingiverse.com/thing:3569302> to provide the bolt holes for the TH8A.

There are several other TH8A remixes out there - but they also tend to merge the surface and outer bracket. I am printing on a prusa mini so I needed to keep the split.

Can't link to the author on here in the remix field as they are not on this site - so - direct link - <https://www.thingiverse.com/jeoje/designs>

Print with the area with the recessed holes for bolt heads down to the plate (upside-down to how it will be mounted when done)

Quick note - on my print I closed off the holes where it attaches to the rest of the mount as I didn't have the hardware - but I did have some 5 minute

epoxy - so that's why the screw holes are not on the photos - this is the "Surface-TH8A-remix-glue" STL
