Summary

This is a 44x44mm square mount that screws on to the middle assembly that allows you to connect your Hadley telescope.

I don't recommend using this long-term but it works well enough as a stopgap until a more solid Dobsonian base can be made. The Amazon Basics tripod is tough to move, imprecise, and sways way more than a solid base would.

I recommend printing with sturdy material. I used PLA+ at 50% infill but you may wish to use something stronger with higher infill. Designed in F360.

This remix is based on

Astronomical Telescope "Hadley" - an easy assembly, high performance Newtonian
