In my home workroom/office i use Ikea lack tables like a tower shelf. Gen2 modular lack drawers are great for use of free space (40cm is more then banana box height:-) ).

Of course exists single and double width of drawers, standard and slim, gridfinity too. This is like a gridfinity type. But when you are not sure how to use it in the future it is more flexible. Today I use this for small spare parts from house maintenance (furniture hardware, plumbing material, and other "you must know where is")

Inserts are 3mm lower then standard drawer depth (Gen2 case has protrusions due to the drawer falling out). Folds are for better manipulation.

Model 78x158 is for after change decision (it is single drawer size- better use 2 single block in project) but who plans the future well :-)

Print in VASE mode.

BTW I also have smaller Lack tables (35 width), 245mm between legs - 1 double and 1 single modul with 94% width of standard size (check before again, size of case and drawer must be exactly, if you don't want grinding).

I don't think the material and nozzle size matter; it is just insert.

Material: PETG

Print: VASE mode

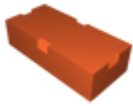

Nozzle: 0,4mm

Height: 0,2mm (variable possible)
