Hydra Compatible

4.1 Model updated for Errors in model that someone reported

bambulab 2 row desiccant holders, this works with a hydrometer and sits behind it as well

in total you can fit 5 inside, 6 without the hydrometer and you do not have to remove the filament rolls to get any of them out

This is compatible with V2 and V3 AMS, you can have 2 rows in each with this, what's great about it is since there is air in-between the rows just smidge it allows for more desiccants to be on the outside

Hydrometer
