Summary

Clip-on type box and wire clip, parametrically designed for flexible adaptation.

Tags: [parametric](#) [fusion360](#)

These are 2 separate models of clip-on wire clip and utility box. They are parametrically designed in Fusion 360 to adopt flexible pipe, wire, and box dimensions.

I designed them to use on my studio C-stands and tripods.

To get your own adaptation, open up in Fusion 360, go to Modify>Parameters to open the parameters table and there type in the parameters you like. The model will instantly change according to the new dimensions you provided. Send them to your slicer software and print them.

I'm not including any STLs because they are meant to be adapted to your needs. :)

Have fun!

Following is the video I made for the design process:
