I love the Bellman CX-25P cappuccino maker - it has elevated our camping latté-making skills and the steaming wand is so much better than boiling milk in a saucepan! My only complaint was the lack of a funnel to make pouring the coffee grinds into the filter basket easier, or a tamper with a hole in the middle so you can tamp the grinds down. So I've made both.

Let's not debate in this forum whether you actually need to tamp coffee grinds in this style of machine. It will still impress your friends.

Funnel Details:

- ~40mm high and ~100mm wide at the top (so it fits without hitting the pressure gauge or steaming wand).

- 11mm hole up the centre so the funnel can fit over (and be held in place by) the threaded rod up through the centre of the unit (so you don't need to remove the filter basket to fill it).

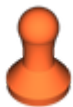

Tamper Details:

- 71mm in diameter and 87mm tall. (mine is two colours because the print failed halfway through.
- 11mm hole goes ~65mm up the centre - so you can tamp the coffee grinds without removing the filter basket from the unit.
- 16mm hole goes ~10mm up the centre - so the tamper will fit over the various inserts for a 3cup, 6cup and 9cup filter basket.
