Tags: [tool](#) [mgn12](#) [installation](#) [cftube](#)

Ever felt the pain of installing nuts inside carbon fiber square tube for your MGN rail?

This model should help you out and decrease your rum consumption. Designed for 40 cm tube and you might need to split it in your slicer if it doesn't fit your print bed.

Just insert nuts to corresponding holes, stick it inside the tube, prop it up against the holes and voila :) You can remove it after succesful installation.

Thanks to Simon Vez @VZBot for idea!
