Water bottle clip, designed to secure a standard water bottle to the webbing on a backpack shoulder strap, or belt. Similar to "Aqua Clip". This is the third revision, as I've managed to remove extra, unneeded material, and shave off a few grams; while still retaining rigidity. The textured finish on the clip (from 3D printing) adds a bit of security, so it doesn't slide out of the shoulder strap so easily, when bending over. I'd also recommend dipping the end of the clip in some kind of "rubber dip" for more security.

Edit: Been using v3 for many years now since originally posted back in 2019; hasn't failed yet. Would recommend using with 1L bottles of smaller, 2L bottles tend to be too heavy. ymmv.

Edit: v2 Recreated from the ground up. Should be a lot more substantial.

For the gram weenie's out there:

Total weight, of printed clip (in PLA): 4 grams

v2 Total weight, of printed clip (in PLA): ?

Constructive feedback welcome!
