### Summary

There is no such thing as too many hexagons! So here is a sturdy hexagonal cup for the Honeycomb Storage Wall.

All parts are defined to fit into an “insert-empty” connector of the storage wall. The fit was rather tight for me, but when in doubt glue the ring and spacer into one of the connectors.

### Hints for Printing

- It is recommended to print with a wall thickness that does not require infills for the cup
- no supports needed

If you need different sizes, let me know.

Happy printing!
