Update 27/11/2022:

added a little version that is 20mm shorter.

Wanted something different as a knob, so made my own. About 10cm tall and 3,6cm wide.

Printed in eSUN ePA-CF for max durability.

To replace the Knob just tug on on it (takes some force), remove the white clip, remove the metal clip and insert it in the printed knob.

In the first pic the knob isnt fully inserted because the nylon shrunk, making the fitment VERY thight. Other materials like PLA did fit nice. I had to make the tolerances quite tight to reduce wobble.
